

AI Fundamentals in the Workplace - Capstone Project

Using ChatGPT to Improve Menu Items in Platform01

Course: AI Fundamentals in the Workplace

Date: 14/09/2026

1. Target Task

One recurring text-based task in my restaurant04 management project is reviewing menu items before publishing them to customers.

Menu items may be entered with:

- Spelling mistakes
- Weak English or Arabic names
- Missing or incorrect categories
- Basic descriptions
- Inconsistent formatting

For this project, I created four fictional draft items in Platform01.

My first item was entered as **“Saudi Coffe”** with the Arabic name **“قهوه”**, no category and a basic description.

The other items also had messy names, incorrect categories or incomplete descriptions.

I used ChatGPT to review all four items together and recommend better English and Arabic names, suitable categories and clearer descriptions.

This task is:

- Real and related to my restaurant04 management project
 - Repeated when new menu items are added
 - Mainly text-based
 - Suitable for AI assistance
 - Easy for me to verify before applying the changes
-

2. Original Menu Items

The following fictional items were entered into Platform01 before using ChatGPT:

No.	Original English Name	Original Arabic Name	Original Category	Price	Original Description
1	Saudi Coffe	قهوه	None	SAR 7	Saudi coffee hot.
2	Ice Spanich	سبانيش بارد	Drinks	SAR 28	Cold Spanish latte.
3	Cake Choco	كيك	None	SAR 24	Chocolate cake.
4	Black Coffe	قهوه بلاك	Drinks	SAR 8	Black coffee hot or cold.

3. Data Masking and Sanitised Input

Before submitting the information to ChatGPT, I removed all personal, confidential and identifying information.

Information Removed or Replaced

Information Type	Masking Action
Platform name	Replaced with "Platform01"
Restaurant name	Replaced with "Restaurant04"
Owner's name	Removed
Employee names	Removed
Customer information	Removed
Telephone numbers	Removed
Email addresses	Removed
Account identifiers	Removed
Branch address	Removed
Confidential organisational information	Not included

The four menu items were fictional demonstration items. They did not contain real merchant, employee or customer information.

The browser address and any account information were hidden or cropped in the screenshots.

4. Structured R.A.C.E. Prompt

I structured my prompt using all four pillars of the R.A.C.E. framework: Role, Action, Context and Expectation.

Role

You are a professional bilingual menu optimisation assistant for cafés and restaurant ordering platforms in Saudi Arabia.

Action

Review and improve four messy draft menu items. Correct their English names, provide natural Arabic names, assign appropriate categories and improve their descriptions.

Context

The items are fictional examples entered into a restaurant management platform. They contain spelling mistakes, unclear Arabic names, missing or incorrect categories and weak descriptions.

The prices must remain unchanged because ingredient costs, serving sizes, competitor prices and target profit margins are unavailable.

Expectation

Return the result in a structured Markdown table. Use professional English and natural Arabic suitable for customers in Saudi Arabia.

Do not invent ingredients, sizes, flavours or preparation methods. Keep the existing prices unchanged and identify information that requires verification.

Complete Prompt Submitted to ChatGPT

Role:

You are a professional bilingual menu optimisation assistant for cafés and restaurant ordering platforms in Saudi Arabia.

Action:

Review and improve the four messy draft menu items provided below.

For each item:

1. Correct and improve the English product name.
2. Provide a natural Arabic product name suitable for Saudi customers.
3. Assign the appropriate menu category or categories.
4. Improve the English product description.
5. Provide a matching natural Arabic description.
6. Retain and display the existing price.
7. Identify any information that should be verified.

Standardise the spelling, naming, categories and description style across the menu.

Context:

I am preparing a small demonstration menu for restaurant04 inside a Platform01. The draft items contain spelling mistakes, unclear Arabic names, missing or incorrect categories and weak descriptions.

The intended final products and categories are:

- Saudi Coffee belongs to the Hot Coffee category.
- Iced Spanish Latte belongs to the Cold Coffee category.
- Chocolate Cake belongs to the Desserts category.
- Black Coffee is available hot or cold and belongs to both the Hot Coffee and Cold Coffee categories.

The existing prices must remain unchanged because ingredient costs, serving sizes, competitor prices and target profit margins have not been provided.

The Arabic names and descriptions should sound natural to customers in Saudi Arabia. They should not be awkward literal translations.

All information is fictional and sanitised. It contains no real customer names, employee names, telephone numbers, email addresses, account identifiers or confidential organisational information.

Expectation:

Return the result as a Markdown table with these columns:

- Original Name
- Recommended English Name
- Recommended Arabic Name
- Recommended Category or Categories
- Current Price

- Improved English Description
- Improved Arabic Description
- Verification Note

Follow these rules:

- Correct all spelling mistakes.
- Use “Saudi Coffee” and “قهوة سعودية” for the first item.
- Assign the first item to “Hot Coffee.”
- Use “Iced Spanish Latte” and “سبانش لاتييه بارد” for the second item.
- Assign the second item to “Cold Coffee.”
- Use “Chocolate Cake” and “كعكة الشوكولاتة” for the third item.
- Assign the third item to “Desserts.”
- Use “Black Coffee” and “قهوة سوداء” for the fourth item.
- Assign the fourth item to both “Hot Coffee” and “Cold Coffee.”
- Keep each English and Arabic description under 20 words.
- Use clear, natural Arabic appropriate for a Saudi café menu.
- Do not invent ingredients, sizes, flavours or preparation methods.
- Keep all existing prices unchanged.
- Do not claim that the prices are correct without supporting cost data.
- Use only the supplied information.
- State that pricing requires cost and size verification.

Draft menu items:

Item 1

Original English name: Saudi Coffe

Original Arabic name: قهوة

Current category: None

Price: SAR 7

Original description: Saudi coffee hot.

Item 2

Original English name: Ice Spanich

Original Arabic name: سبانش بارد

Current category: Drinks

Price: SAR 28

Original description: Cold Spanish latte.

Item 3

Original English name: Cake Choco

Original Arabic name: كيك

Current category: None
Price: SAR 24
Original description: Chocolate cake.

Item 4

Original English name: Black Coffe
Original Arabic name: قهوه بلاك
Current category: Drinks
Price: SAR 8
Original description: Black coffee hot or cold.

5. Initial ChatGPT Output

ChatGPT returned corrected English and Arabic names, suitable categories and improved descriptions.

Original Name	Recommended English Name	Recommended Arabic Name	Category	Price	Improved English Description	Improved Arabic Description
Saudi Coffe	Saudi Coffee	قهوة سعودية	Hot Coffee	SAR 7	Traditional Saudi coffee served hot.	قهوة سعودية تقليدية تقدم ساخنة.
Ice Spanich	Iced Spanish Latte	سبانش لاتيه بارد	Cold Coffee	SAR 28	A cold Spanish latte served as a chilled coffee drink.	سبانش لاتيه بارد يقدم كمشروب قهوة بارد.
Cake Choco	Chocolate Cake	كعكة الشوكولاتة	Desserts	SAR 24	A chocolate cake served as a dessert.	كعكة شوكولاتة تقدم كحلى.
Black Coffe	Black Coffee	قهوة سوداء	Hot Coffee and Cold Coffee	SAR 8	Black coffee available hot or cold.	قهوة سوداء متوفرة ساخنة أو باردة.

ChatGPT retained the four original prices. It also warned that the prices required cost and serving-size verification.

Ice Spanich	Iced Spanish Latte	سبانش لاتيه بارد	Cold Coffee	SAR 28	A refreshing cold Spanish latte.	سبانش لاتيه بارد ومنعش.	Pricing of product size.
Cake Choco	Chocolate Cake	كعكة الشوكولاتة	Desserts	SAR 24	A delicious chocolate cake dessert.	كعكة شوكولاتة لذيذة للحلى.	Pricing of product size.
						قهوة سوداء متوفرة ساخنة أو باردة.	Pricing of product size.

+ Ask ChatGPT

High

This screenshot shows ChatGPT's first response.

6. Iterative Refinement

The initial response was useful, but some descriptions were longer than necessary and repeated information.

For example, the Iced Spanish Latte description repeated the word “cold” and the phrase “chilled coffee drink.” I wanted the descriptions to be shorter and more suitable for a digital menu.

I sent a follow-up prompt to improve the existing response rather than restarting the task.

Follow-Up Prompt

The names, categories and prices are correct, but refine the descriptions.

Make every English and Arabic description shorter and easier to read on a digital menu.

Remove repeated words and unnecessary phrases. Do not invent ingredients, sizes, flavours or preparation methods.

Keep all names, Arabic names, categories and prices unchanged.

Keep every description under 12 words and return the final result as a compact Markdown table.

Refined ChatGPT Output

English Name	Arabic Name	Category	Price	Final English Description	Final Arabic Description
Saudi Coffee	قهوة سعودية	Hot Coffee	SAR 7	Traditional Saudi coffee served hot.	قهوة سعودية تقليدية تقدم ساخنة.
Iced Spanish Latte	سبانش لاتيه بارد	Cold Coffee	SAR 28	Spanish latte served cold.	سبانش لاتيه يقدم بارداً.
Chocolate Cake	كعكة الشوكولاتة	Desserts	SAR 24	Chocolate cake served as a dessert.	كعكة شوكولاتة تقدم كحلى.
Black Coffee	قهوة سوداء	Hot Coffee and Cold Coffee	SAR 8	Black coffee available hot or cold.	قهوة سوداء متوفرة ساخنة أو باردة.

7. Applying the Result in Platform01

After reviewing the refined output, I updated the four demonstration items in Platform01.

The applied values were:

Final English Name	Final Arabic Name	Final Category	Price
Saudi Coffee	قهوة سعودية	Hot Coffee	SAR 7
Iced Spanish Latte	سبانش لاتيه بارد	Cold Coffee	SAR 28
Chocolate Cake	كعكة الشوكولاتة	Desserts	SAR 24
Black Coffee	قهوة سوداء	Hot Coffee and Cold Coffee	SAR 8

8. Verification and Accuracy

I manually compared the ChatGPT output with the original sanitised input and the updated Platform01 items.

I verified that:

- “Saudi Coffe” was corrected to “Saudi Coffee.”
- “Ice Spanich” was corrected to “Iced Spanish Latte.”
- “Cake Choco” was corrected to “Chocolate Cake.”
- “Black Coffe” was corrected to “Black Coffee.”
- Natural Arabic names were provided for all four items.
- Saudi Coffee was assigned to Hot Coffee.
- Iced Spanish Latte was assigned to Cold Coffee.
- Chocolate Cake was assigned to Desserts.
- Black Coffee was assigned to Hot Coffee and Cold Coffee.
- All four original prices remained unchanged.
- No ingredients, sizes or flavours were invented.
- No private or confidential information appeared in the prompt or output.

Arithmetic Verification

I checked the prices before and after applying the recommendations.

Original total:

SAR 7 + SAR 28 + SAR 24 + SAR 8

Updated total:

SAR 7 + SAR 18 + SAR 19 + SAR 8

The total did not change, confirming that ChatGPT preserved all four entered prices.

The prices were not treated as verified selling-price recommendations because ingredient costs, serving sizes and profit-margin information were unavailable.

9. Impact and Estimated Time Saved

I compared the estimated time needed to review and rewrite the four items manually with the time needed using ChatGPT.

Method	Estimated Time
Manual review and bilingual rewriting	35 minutes
Using ChatGPT and manually verifying the output	12 minutes
Estimated time saved	23 minutes

Time-Saving Calculation

35 minutes – 12 minutes = 23 minutes saved

Estimated percentage reduction:

$23 \div 35 \times 100 = 65.7\%$

Using ChatGPT reduced the estimated completion time by approximately **66%**.

Human verification was still required before updating Platform01, especially for the Arabic wording, categories and prices.

Conclusion

ChatGPT helped me transform four messy menu items into clearer and more consistent bilingual menu entries.

The R.A.C.E. framework allowed me to define the role, required actions, business context and expected output. The follow-up prompt improved the descriptions without restarting the task.

Data masking protected personal and organisational information. Manual verification ensured that the names, categories, descriptions and prices were correct before I applied the changes inside Platform01.
